About me

I am a web developer, I like to make web pages as well as apply good practices for the development of these, I also like to learn new technologies and find different ways to solve some kind of problem.

My Personal Projects

Veterinary-LoyalFriend

Project that consists of making appointments, adding testimonials and has a contact form. It also has an administrator interface to view the above mentioned. JWT was used for user authentication.
Stack: JavaScript, React, Sass, Redux, MongoDB, NodeJS, Express

Finding Pets

Project of a small social network made in nextJS, with the objective of finding lost pets through publications, in addition to being able to comment on publications and customize your profile. Jotai was used for global status management, and JWT for user authentication.
Stack: JavaScript, TypeScript, NextJS, CSS, MongoDB, Jotai

Nova Shop

Project for the simulation of an ecommerce focused mainly on making a template. For this project we have used JWT for user authentication and nodemailer for sending email for account confirmation.
Stack: JavaScript, HTML5, CSS, MongoDB, NodeJS, Express

Account Manager

Project in which the user will be able to manage/store his accounts. On the other hand it has the user authentication with JWT, in addition to check the mail through an email sent.
Stack: JavaScript, TypeScript, React, Jotai, Python, FastAPI, TailwindCSS, MySQL

My Best Practices

- Clean Code
- Principles SOLID

Technologies and Tools

JavaScript TypeScript Vue React NextJS HTML CSS

TailwindCSS NodeJS MongoDB MySQL
